

## BACKGROUND

ISOPA, MPOB and SOPPOA are organizing this field clinic mainly to address on the importance of controlling pests and diseases (P&D) of oil palm on peat which cause growth retardation and yield reduction. These include termites, bunch moth, Ganoderma etc. Integrated pest management (IPM) approach is advocated for regular monitoring and early detection of the problem. Thus, control measures and immediate treatments should be applied timely to prevent widespread attacks.

### Objectives

1. To familiarize symptoms of BSR disease and pests attacks (Termite & Tirathaba) under actual field condition.
2. To identify breeding ground of Termite & Tirathaba.
3. Hands-on training in managing and controlling P&D of oil palm planted on peat.

### Who should attend

Agronomists, managers, planters, researchers, scientists, students and individuals interested in in IPM in oil palm on peat.
